Internship Offer Letter

Student Name : Prasanna Pradeep Bhurke
Stream : B.Tech
Branch : B.Tech(Computer Science and Engineering)
Institute Name : D.Y. Patil College of Engineering and Technology, Kolhapur
Internship Domain : Quantum Computing
Internship Duration : April 2026 - June 2026
AICTE Student ID : STU69723c5be90451769094235

We are pleased to inform you that you have been selected for the 8-Week **AICTE – EduSkills Virtual Internship Program**.

During this internship, you will learn and demonstrate industry-relevant skills that will enhance your employability and strengthen your confidence in the subject area.

The program is designed to provide structured learning combined with practical exposure.

Internship Structure & Evaluation:

- The internship will follow a **week-wise structured learning plan**.
- You will be required to complete **weekly assessments** to track your progress and understanding.
- Certain modules will require submission of **project documentation and assignments**.
- In the final week, you must appear for a **Final Assessment Test**.
- The final grade will be based on your overall performance, including weekly assessments, project submissions, and the final test.

Upon successful completion of all required steps and assessments, you will be awarded a **Virtual Internship Certificate**.

Please note that this offer letter will be considered valid only after the successful completion of the internship program and fulfillment of all assessment requirements, including obtaining the final completion certificate. Without the final completion certificate, this offer letter shall not be treated as a valid document for any official purpose.

The week wise Structure of the Internship is as Follows:

Week	Module	Description
Week 1	Classical Foundations & Quantum Principles	Review of classical computing (bits, gates, algorithms, P vs NP) and introduction to quantum mechanics concepts including superposition, entanglement, and measurement.
Week 2	Mathematics & Qubit Fundamentals	Linear algebra, complex numbers, probability foundations, qubits, Bloch sphere, and basic quantum gates (Pauli, Hadamard).
Week 3	Quantum Gates, Circuits & Measurement	Single and multi-qubit gates (CNOT), circuit construction using Qiskit, quantum measurement principles, and state collapse.
Week 4	Quantum Algorithms Foundations	Quantum speedup concepts, Deutsch-Jozsa algorithm, circuit design, and implementation strategies.
Week 5	Grover's & Shor's Algorithms	Grover's search algorithm, oracle and diffusion operators, Shor's factoring algorithm, RSA implications, QFT and phase estimation basics.
Week 6	Quantum Fourier Transform & Error Correction	Classical vs quantum Fourier transform, QFT circuits, decoherence, noise models, repetition codes, Shor codes, and error correction techniques.
Week 7	Quantum Simulation & Quantum ML	Quantum simulation challenges, VQE and QPE methods, introduction to quantum machine learning, quantum kernels, and quantum neural networks.
Week 8	Quantum Hardware & Ethics & Future Trends & Capstone Project	Superconducting, trapped-ion, and photonic qubit architectures, ethical considerations, cryptographic impact, and responsible development.
Internship Grade Point Assessment		

Note: There is no stipend associated with this internship.

We congratulate you on your selection and wish you a successful learning journey.
